

Daughtercard Accessory Kit Hardware Advisory Notice Vanguard 6435/6455

Daughtercard Headers

All daughtercards installed in Vanguard 6435 or Vanguard 6455 products require a header that is different from that currently used with other Vanguard products.

Types of Header

Effective January 3, 2000, all Vanguard daughtercards ship from the factory with two types of headers:

- A short two-sided header. This is used to install daughtercards in the Vanguard 6435 or the Vanguard 6455.
- A taller header. This one is used to install daughtercards in all other Vanguard products.

If you have an existing inventory of daughtercards and want to install them in a Vanguard 6435 or Vanguard 6455, you must use the headers provided in the accessory kit.

Accessory Kit Contents

Included in this accessory kit are three of the new type of Vanguard daughtercard headers. The daughtercard header, part number 60232-36, must be used when installing daughtercards into a Vanguard 6435 or Vanguard 6455.
