Vanguard Networks Debuts Vanguard 3460 Advanced Services Gateway

By **Jai C.S.**

TMCnet Contributing Editor

Vanguard Networks, the providers of multi-service access gateways and IP routers have expanded their portfolio of products with the latest launch of Vanguard 3460 Access Services Gateway (ASG).

This product is an enterprise communications solution developed for broad "smart branch" applications worldwide.

Vanguard has been serving the industry for several years and their series of products facilitate the integration of secure IP services with legacy data, voice, and video applications over the Wide Area Network (WAN) and at the same time enable seamless optimization of network performance, security, and quality of service (QoS).

Today's branch office network demand greater flexibility and modular architecture which is completely met by the 3460 Advanced Services Gateway (ASG). This latest product of Vanguard Networks is a modular, integrated platform that supports any application in any carrier service, reducing total cost of ownership (TCO) and ensuring maximum investment protection. It has the capability to transform branch operations into new "Smart Branch".

Vanguard 3460 ASG Enables Multi-Vendor Advantages.

Ray Mota, chief strategist, Synergy Research Group, London, UK comments on Vanguard Networks products as a platform that puts them in an advantageous position.

"Standards-based design of the 3460 ASG ensures complete interoperability in multi-vendor environments," said Juan Carlos Garcia, vice president, marketing, Vanguard Networks.

"With the 3460 ASG, global customers can choose best-of-breed devices that can offer lower cost, more flexibility and better performance over proprietary solutions provided by a single vendor."

The 3460 ASG allows service providers to easily and quickly deploy new converged multimedia services to customers.
